

I want to share the comment about the RS type 97 AEG. It is the first type 97 AEG in the world. About the design of product, just like a real gun, it is made of military Engineering Plastics to make the AEG handier. Lower receiver made of Aluminum, the Gas block; Front sight, Rear sight outer barrel, and the main frame are Steel. More details and history of the Type 97 can be found in RS office website. I am highly appreciated about its design, because the place of charging handle is suitable for the player who is left-hander. The real type 97 rifle's caliber is 5.56mm same as M16. So the magazines of RS type 97 AEG are compatibility with most brands of M16 series magazine. Only one inadequacy is type 97 can't like M4 have many places to install rail system.

About the upgrade, RS type 97 AEG is a perfect one. Real Sword has Picatinny Mount Base and quick attach bipod. We can install sights easily. But in the future, I desire RS have a Grenade Launcher for type 97 AEG. Reference to the M203 Grenada Launcher, it will be

possible. Like the real type 97 rifles.

(real type 97 rifle with Grenade Launcher)

This rifle is come from China, so play PLA (People's Liberation Army) for CQB and using type 97 AEG is the best choice. In Hong Kong we play PLA all using RS type 97 AEG.

Here is my comment on RS type 97 AEG and Happy New Year to you all guys.
